

UBQ Network[®]

Map View and Graph View

Improve Freshness. Extend Shelf Life. Reduce Food Waste.

Smarter Supply Chain Monitoring Starts Here

How can the UBQ Network support your vision for better freshness and longer shelf life while reducing food waste?

It starts with **automation.**

The UBQ Network seamlessly adds your FlashLink device data —from both historical and live shipments—without any extra work. This includes real-time temperature alarms and location tracking to help ensure quality throughout the journey.

Easy Shipment Setup

Getting started is simple. Add new shipments directly:

- ✓ In-App
- ✓ Via API
- ✓ Through Excel Uploads

We only activate the services you need for each trade lane. For example, in a maritime lane, a shipment may include a FlashLink NOW Real-Time Logger, Maritime Tracking, Digital Cargo Insurance and Carbon Emission Reporting with full end-to-end coverage.

Everything is customizable to match your specific shipment needs.

Automated, Error-Free Workflow

Our intelligent workflow engine ensures:

- ✓ Automatic data flow between services
- ✓ No manual re-entry
- ✓ No data capture errors
- ✓ Full task completion visibility

This reduces time waste and improves operational accuracy. Use the new UBQ Network live screen to manage temperature tracking, shipment status and real-time supply chain visibility.

Map View + Graph View = Actionable Insights

Zoom into any shipment's journey with:

- Map View:** Automatically overlays device and vessel location data
- Track progress from origin to destination
 - Drill down to key points like the port of Rotterdam or final receiver
- Graph View:** Displays temperature trends
- Shows real-time data vs. pre-set upper and lower thresholds
 - Automatically flags excursions and alerts
